DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show reference 9 as described in the specification on page 13, line 23. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "8" has been used to designate both fibers on page 13, line 21 and light guides on page 14, line 4. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities:

- On page 3, lines 30, the term "as" makes the sentence hard to discern. Examiner notes that it should probably be changed to --and--.
- Throughout the specification, there are references to specific claims. This is not proper under U.S. practice and the references must be removed.

Art Unit: 1722

For example: On page 3, line 27, "as specified in claim 1" should be deleted.

Appropriate correction is required.

Allowable Subject Matter

4. Claims 1-20 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach a method of manufacturing three dimensional object by means of a rapid prototyping apparatus with light sensitive material, where the light source illuminates a cross-section of the material by at least two modulator arrangements of individually controllable light modulators, the light source is optically coupled with a plurality of light guides arranged with respect to the light modular arrangement and each light guide illuminates a sub-area of the cross-section. The closest prior art, Hull and Fudim, teaches a scanning light source instead of the light guides while Henningsen (6,296,383) merely teaches controlling the light source and does not teach for use in a rapid prototyping machine.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cheng, Redford and Shiraishi et al.

Art Unit: 1722

7. This application is in condition for allowance except for the following formal matters: The objections in the drawings and in the specification.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

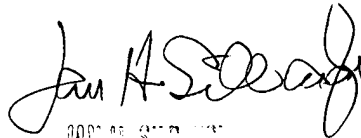

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
